Revalidate

Validation Output: 2 Errors

✘ **Line 239, Column 79: document type does not allow element "a" here; missing one of "object", "span", "bdo", "applet", "iframe", "tt", "i", "b", "u", "s", "strike", "big", "small", "font", "em", "strong", "dfn", "code", "q", "samp", "kbd", "var", "cite", "abbr", "acronym", "sub", "sup", "label", "ins", "del" start-tag**

```
...//samarbeidforarbeid.regjeringen.no/" > Samarbeid for arbeid</a></a>
```

The mentioned element is not allowed to appear in the context in which you've placed it; the other mentioned elements are the only ones that are both allowed there *and* can contain the element mentioned. This might mean that you need a containing element, or possibly that you've forgotten to close a previous element.

One possible cause for this message is that you have attempted to put a block-level element (such as "<p>" or "<table>") inside an inline element (such as "<a>", "", or "").

✘ **Line 258, Column 23: Attribute "Style" is not a valid attribute. Did you mean "style"?**

```
<h2 style="font-size:2.0em;">
```

You have used the attribute named above in your document, but the document type you are using does not support that attribute for this element. This error is often caused by incorrect use of the "Strict" document type with a document that uses frames (e.g. you must use the "Transitional" document type to get the "target" attribute), or by using vendor proprietary extensions such as "marginheight" (this is usually fixed by using CSS to achieve the desired effect instead).

This error may also result if the element itself is not supported in the document type you are using, as an undefined element will have no supported attributes; in this case, see the element-undefined error message for further information.

How to fix: check the spelling and case of the element and attribute, (Remember XHTML is all lower-case) and/or check that they are both allowed in the chosen document type, and/or use CSS instead of this attribute. If you received this error when using the <embed> element to incorporate flash media in a Web page, see the [FAQ item on valid flash](#).

Link checker

<http://validator.w3.org/checklink>

There are issues with the URLs listed below. The table summarizes the issues and suggested actions by HTTP response status code.

Code	Occurrences	What to do
(N/A)	12	<i>The link was not checked due to robots exclusion rules. Check the link manually, and see also the link checker documentation on robots exclusion.</i>
(N/A)	1	Accessing links with this URI scheme has been disabled in link checker.
200	5	Some of the links to this resource point to broken URI fragments (such as <code>index.html#fragment</code>).
302	1	<i>This is a temporary redirect. Update the link if you believe it makes sense, or leave it as is.</i>
404	2	The link is broken. Double-check that you have not made any typo, or mistake in copy-pasting. If the link points to a resource that no longer exists, you may want to remove or fix the link.
